

MFT FAQs

Q: What modules are available for the MFT?

A: Available modules include differential, gauge, vacuum and absolute pressure as well as temperature and voltage/current. Modules are interchangeable in 3 bay locators.

Q: Is the MFT updatable in the field?

A: Yes. Through Internet downloads you can update and add capability.

Q: What is a download subscription and do I need one?

A: In order to download from the DOF Site you will need to purchase a download subscription from Meriam. This allows you to download firmware and revisions directly to your MFT. It can be purchased with the unit or at a later date.

Q: What is the difference between the MFT4000 and MFT4010?

A: The MFT4000 is a base unit for calibration work with selected NIST traceable sensor modules & integral voltage/current meter. The MFT4010 is a base unit for modules and full Device Specific HART[®] Communications.
