

Meriam Process Technologies compliance relative to European Union Directives

Dear Valued Customer,

Meriam Process Technologies provides the following information regarding EU Directives 2002/96/EC and 2002/95/EC which is commonly referred to as (WEEE – Waste Electrical and Electronic Equipment) and (RoHS – Reduction of Hazardous Substances).

The EU has passed directives that require the reduction of hazardous material linked to heavy metals and flame-retardants. The RoHS directive specifies that from July 1, 2006 new electrical and electronic equipment shall not contain Lead (Pb), Mercury (Hg), Cadmium (Cd), Hexavalent Chromium (Cr⁶), Polybrominated Biphenyls (PBB), or Polybrominated Diphenyl Ethers (PBDE) with the exclusion of those items listed as exempt in the annex to Directive 2002/95/EC. The WEEE directive gives guidance on the reuse, recycling, and disposal of items with the metal listed above.

Meriam Process Technologies is committed to the compliance of the RoHS and WEEE directives. Alternative materials and vendors are currently being identified and evaluated to bring relevant products into compliance for the European market. The compliant product will be labeled or marked in some manner to identify compliance.

The specific material that is currently found in Meriam Process Technologies products includes Lead, which is used in the soldering process.
