RTD Measure & Simulate Module FAQs

Q: Which product uses this module?

A: The RIO4000 is the RTD measure and simulate module for the MFT4000.

Q: What exactly does this module do?

A: The module accurately measures or simulates the resistance of 22 different RTD sensor types with nominal resistance to 4000 ohms.

Q: How is the simulation mode setup?

A: The RTD Simulation mode can be setup by entering a specific temperature or a range of temperatures for stepping and ramping functions.
