

## VMA0055 FAQs

Q: Which products use these modules?

A: The VMA0055 is a DC voltage and current measurement and simulation module for use with the Meriam MFT4000 Multi-Function Tester.

Q: Will I receive quality documentation with the pressure modules?

A: Yes. A NIST certificate and calibration data are included with each module for quality assurance purposes.

Q: How can I calibrate these pressure modules?

A: Meriam sensor modules are designed to be re-calibrated in the field without appropriate local calibration standards. Meriam also provides factory re-calibration services for pressure modules including complete documentation and certification.
